PROFESSIONAL SUMMARY

Junior Backend Developer and Full Stack Developer with 1 year of freelance experience and a backend internship at Rizq Tech, Karachi — building production-grade apps across finance, healthcare, and education. Skilled in React.js, Django, Python, REST APIs, and FastAPI, with proven AI/ML delivery: a CNN eye disease classifier at 90%+ accuracy and an HBL Car Loan Calculator with AI-driven forecasting. Meta Back-End Developer certified (Coursera, 9 courses). BSE finalist at Bahria University, Karachi (June 2026). Open to Backend, Full Stack, and AI/ML roles — on-site (Karachi / Islamabad / Lahore) or remote.

- **90%+ CNN validation accuracy** on a 5,000+ image medical dataset using TensorFlow/Keras — deployed via Flask REST API with sub-2-second inference.
- **Delivered 5+ production-grade applications** across finance, healthcare, and education using React.js, Django, Flask, and ASP.NET Core.
- **Built 10+ RESTful API endpoints** at Rizq Tech, achieving ~30% reduction in average data exchange latency between React.js clients and Django backend services.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, HTML5, CSS3, SQL, Java

Frameworks & Libraries: React.js, Next.js, Django, Flask, FastAPI, ASP.NET Core, Bootstrap, Chart.js, Node.js

Databases: MySQL, PostgreSQL, MongoDB

AI / Data: TensorFlow, Keras, CNN, RNN, NumPy, Pandas, Pillow

DevOps & Tools: Git, GitHub, GitHub Actions, Docker, Figma, VS Code, Google Colab, Jupyter

Methodologies: Agile, Scrum, MVC Architecture, OOP, SDLC, RESTful API Design

EXPERIENCE

Backend Developer Intern — Rizq Tech, Karachi

December 2025 – February 2026

- Built and maintained 10+ RESTful API endpoints using Python and Django, cutting average data exchange latency by ~30% between React.js frontend clients and Django backend services.
- Designed and optimized 3+ relational database schemas in MySQL and PostgreSQL, improving query retrieval speed by ~25% across 5+ core entities — integrated directly with Django ORM for clean data access.
- Resolved 15+ Python/Django bugs and implemented JWT authentication middleware with role-based access control, improving REST API reliability for downstream React.js clients.

Freelance Full Stack Developer — Self-Employed

May 2025 - Present

- Designed and delivered 5+ full-stack web applications across finance, healthcare, and education using React.js, Django, Flask, ASP.NET Core, and MySQL — including an HBL Car Loan Calculator with a real-time EMI engine and a React.js analytics dashboard tracking 6 live metrics across 3 responsive breakpoints.
 - Built a CNN-based eye disease classifier at 90%+ validation accuracy using TensorFlow/Keras on a 5,000+ image dataset, deployed via a Python/Flask REST API with sub-2-second inference.
 - Engineered FinLedger, a Java/MySQL desktop finance app, and developed RESTful backend services in ASP.NET Core with jBCrypt authentication, role-based access control, and MVC architecture.
-

PROJECTS

Blockchain-Based Cargo Management System [View on GitHub](#) [Final Year Project]

- Architected a decentralized cargo tracking system using blockchain and smart contracts to automate 4 shipment state transitions (booking, in-transit, customs, delivery), eliminating manual reconciliation.
- Developed RESTful API backend integrated with the blockchain layer, exposing real-time cargo status endpoints consumed by a responsive React web frontend.

HBL Car Loan Calculator [View on GitHub](#)

- Built a real-time EMI engine computing repayment schedules across 3 interest rate scenarios (static, increasing, decreasing) for loan tenures of 1–7 years, with AI-driven Chart.js forecast charts across 5+ vehicle price ranges.
- Implemented one-click PDF export via jsPDF generating structured loan summary reports in under 1 second; deployed as a fully responsive frontend application.

Eye Disease Classification — AI Based [View on GitHub](#)

- Achieved 90%+ validation accuracy on a 5,000+ image Kaggle dataset classifying 4 eye disease categories using a CNN model built with TensorFlow and Keras; preprocessed images with NumPy and Pillow to reduce training noise.
- Deployed a Flask/FastAPI REST API with JWT authentication enabling secure image upload and sub-2-second disease classification inference.

Career & Counseling Guide Portal [View on GitHub](#)

- Developed a full-stack web platform with 5+ modules (career exploration, session scheduling, article management) using PHP, MySQL, and a microservices-inspired modular architecture.
- Implemented responsive frontend across 3 device types with 4+ planned modules including user authentication, live chat, admin dashboard, and counselor appointments.

Analytics Dashboard (React.js) [View on GitHub](#)

- Built a React.js analytics dashboard visualizing 6 key metrics (visits, bounce rate, session duration, demographics, traffic sources, conversions) using Recharts and Chart.js with 4+ interactive chart types.
- Designed a fully responsive UI with sidebar navigation optimized across 3 breakpoints (mobile, tablet, desktop), simulating real-time API responses via mock JSON data.

FinLedger — Distributed Transaction & Wallet Service [View on GitHub](#)

- Built a Java desktop application with OOP architecture managing user authentication, transaction tracking, and CRUD operations; secured credentials with jBCrypt password hashing integrated via JDBC with MySQL.
- Designed an interactive GUI using rs2xml for real-time data display, decoupling the UI from direct SQL dependency and supporting multi-user account management.

CERTIFICATIONS

Meta Back-End Developer Professional Certificate — Coursera — 9-course program March 2026

- Covered Python, Django, RESTful APIs, databases, version control, data structures, algorithms, and system design.
- Completed a full-stack capstone project as the program finale.

React Basics — Coursera May 2025

- Covered React component architecture, JSX, props, state management, and lifecycle methods.

EDUCATION

Bachelor of Software Engineering — Bahria University, Karachi | CGPA: 3.16 June 2026 (Expected)
